SPOTLIGHT

June 2019

NEW Monthly Spotlight!

Spotlight will now be delivered to your inbox on a monthly basis rather than quarterly. While we're issue will continue to feature the same valuable information, it will be more timely and tailored to the current needs of the community.

Pathways to Promise & Mental Health Ministries

Mental Health Ministries, a program of Pathways to Promise, provides resources to help congregations and faith leaders to address mental health challenges and promote healing.

Mental Health Multifaith Resource Center (MHMRC)

Our Mental Health Multifaith Resource Center is your comprehensive destination for mental health and wellness information. We have meticulously curated this resource center to provide a vast array of information and resources for you, your family, and your community. Please explore the MHMRC and let us know how we can help you!

"The Silent Weight: Mental Health, Racial Trauma, and Healing in the African American Community"

By Dr. Edward S. Carroll

Chairman of the Board and CEO

PTI Healthcare Solutions, Inc.

Board Member, Pathways to Promise

Mental health remains one of the most critical yet underrated areas of healthcare in the African American community. Despite the fact that nearly one in five adults experiencing emotional challenges has grown significantly in recent years, many African Americans continue to suffer in silence due to stigma, misinformation, and fear. These barriers are often rooted in historical oppression, racial discrimination, and systemic inequities that have created a culture of healthcare systems, underscoring the connection between racial trauma, chronic stress, and mental health. Addressing these challenges requires a multifaceted approach, improving mental health outcomes for African Americans.

One of the most significant barriers to mental health research is that African Americans often experience mental therapeutic outcomes when they receive care from African American mental health providers. Shared cultural understanding can foster trust, reduce stigma, and lead to more effective treatment. The therapeutic relationship, Many African Americans report feeling misunderstood or judged by non-Black providers, leading to premature termination. Cultural competence, spirituality, and social pressures with providers who can personally relate to the unique challenges faced by African American patients. A deeper feelings of judgment or misunderstanding and improve treatment adherence, ultimately leading to better mental health outcomes.

The importance of culturally competent care becomes even more apparent when examining the impact of racial trauma on mental health. Racial trauma, also known as race-based stress, refers to the emotional and psychological harm caused by racism, discrimination, and violence. For many African Americans, racial trauma is not a distant memory but a lived experience that continues to affect daily life. Studies have consistently shown that African Americans who experience racial trauma are more likely to develop symptoms of anxiety, depression, post-traumatic stress disorder (PTSD), and substance use disorders. Additionally, racial trauma can manifest physically, leading to chronic health conditions such as hypertension, heart disease, and autoimmune disorders. The cumulative effect of these experiences can be overwhelming, making it difficult for individuals to heal without addressing the root cause.

Many African American women feel pressure to appear strong at all times, even when experiencing emotional pain, anxiety, depression, or trauma. As a result, they may suppress their feelings rather than seek help, further exacerbating their stress-related emotional support. Some women fear being perceived as weak or incapable if they admit to struggling with mental health challenges. Over time, carrying unaddressed emotional burdens can contribute to burnout, relationship strain, and even physical health issues such as heart disease.

The expectation of constant strength can also create mental conflict. Black women are often expected to care for families, support communities, maintain professional success, and uphold cultural traditions—all while managing their own mental health and possible past-based discrimination. Unless these pressures are acknowledged and addressed, many women may find themselves in a state of mental wellness within the African American community is, therefore, essential for breaking down barriers to mental health care and fostering a culture of healing.

Addressing mental health disparities among African Americans requires a multifaceted approach. Increasing the number of African American mental health professionals is crucial, as is the integration of culturally relevant care into existing healthcare systems. Community-based initiatives that offer support groups, faith-based counseling, and educational programs can also play significant roles in reducing stigma and promoting mental health.

Ultimately, healing within the African American community requires recognition that mental health struggles are not signs of weakness but valid responses to systemic and historical trauma. By prioritizing culturally competent care, acknowledging the impact of racial trauma, and encouraging open conversations about mental health, we can begin to dismantle the barriers that have silenced emotional wellness, resilience, and lasting healing.

June

These resources are helpful for any time, although intended to highlight themes from the Mental Health calendar for June.

National PTSD Awareness Month

"June is Post-Traumatic Stress Disorder (PTSD) Awareness Month. This often misunderstood disorder affects about 8 million people in the U.S. and occurs more often in women than men. Historically PTSD has been understood as a result of military service and combat, but it can occur after any traumatic event, such as a car accident, natural disaster, assault, or prolonged abuse."

Trauma and PTSD: Dispelling Myths, Inspiring Hope

"Traumatic events — such as a motor vehicle crash, assault, military combat or natural disaster — can have lasting effects on a person's mental health. While many people will have short-term responses to life-threatening events, some will develop longer-term problems or PTSD. What is a traumatic event?"

"Trauma can be caused by an event, series of events, or a set of circumstances that is experienced by an individual as physically or emotionally harmful or life threatening and that has lasting adverse effects on the individual's physical, social, emotional, or spiritual well-being. Examples of traumatic events include sexual violence, physical abuse, intimate partner violence, and bullying. Other examples of traumatic events are natural disasters, serious accidents, terrorist incidents, and military combat."

National Immigrant Heritage Month

Moving the Culture, Shaping Our Future

"Over the past decade, pro immigrant sentiment has increased from 47% of Americans to 55%, according to Gallup's tracking of people who agree that immigrants strengthen the country."

The following report looks at the impact of cultural strategy within the immigrant rights space, particularly how it helped shift public sentiment toward immigrants and sustain immigrant protections, even amidst political turmoil."

Men's Health Month

"There is often a strong focus on men's physical health — fitness, annual physicals, prostate cancer. But mental well-being is equally as important because mental health is central"

The Importance of Men's Health Month

"National Men's Health Week was established in 1994 as a special campaign to focus on the health of men and boys. Its purpose is to raise awareness about men's health attitudes and preventive health practices. Today, the week is observed around the world as International Men's Health Week and begins on the Monday before Father's Day in June and ends on Father's Day itself."

The aims of the week are to heighten awareness of preventable health problems for males of all ages, to target males in order to encourage a healthier lifestyle choices and to encourage the early detection and treatment of diseases like cancer, heart disease and depression."

National Men's Health Week - June 15-21

"Men's Health Week began in the USA in 1994 following a Senate Joint Resolution. The Week was linked to Father's Day in the USA and so always ends on that Day, the third Sunday in June). It became an international event in 2002 when it was first marked in the UK.

It now runs from one Monday to the next Sunday, Denmark, Ireland, New Zealand and Norway have also adopted the Week. Significantly, a wide range of organizations and individuals to draw attention to the poor state of men's health, organize activities that engage men, and advocate changes to health policy and practice. In short, it puts men's health on the map both nationally and globally.

Loving Day - June 12

5 Ways to Celebrate Loving Day

"If it wasn't for the Civil Rights movement, I would not have been able to be with the love of my life," Jeter said.

She understood enough about her mother's history of race-based laws, activists, and social practices to come to the realization on her own. She stressed around the living room furniture objecting. I smiled, remembered that the connected to her, and marketed to her. While psychologists have found that interracial couples are happier than same-race couples, it is not the case that interracial couples are happier than same-race couples. It is not the case that my daughter understood how racism dictates not only the quality of life, but also PRIDE. She proclaimed, "that's not fair!"

Juneteenth - June 19

What is Juneteenth?

The holiday commemorates an effective end of slavery in the United States.

"Juneteenth, short for "June Nineteenth," marks the day when federal troops arrived in Galveston, Texas, in 1865 to take control of the state and ensure that all enslaved people were free. The troops' arrival came a full two and a half years after President Abraham Lincoln issued the Emancipation Proclamation.

Juneteenth traces the end to slavery in the United States and is considered the longest-running African American holiday. A federal holiday since 2021, Juneteenth is also known as Freedom Day.

Although Confederate General Robert E. Lee had surrendered at Appomattox Court House, Virginia, in April 1865, slavery had remained entrenched in Texas. On June 18, U.S. Army Major General Gordon Granger arrived in Galveston and issued General Order No. 3, which declared, "the people of Texas are informed that, in accordance with a proclamation from the Executive of the United States, all slaves are free."

The Historical Legacy of Juneteenth

"On "Freedom's Eve," or the eve of January 1, 1863, the first Black Night services took place. On that night, enslaved and free African Americans gathered in churches and private homes all across the country, awaiting news that the Emancipation Proclamation had taken effect. At the stroke of midnight, prayers were answered and enslaved people were declared free across the country.

Union soldiers, many of whom were Black, marched into plantations and across cities in the south reading small copies of the Emancipation Proclamation spreading the news of freedom to Confederate States. Only Delaware, Kentucky, and Maryland did not secede from the Union and remained slave states.

National PTSD Awareness Day - June 27

"PTSD stands for Post Traumatic Stress Disorder and is a condition that many veterans and non-veterans alike suffer. PTSD can occur when someone experiences or witnesses a traumatic event. This condition wasn't always known as PTSD, however. In the past, it was known as shell shock or combat fatigue.

Different stress relievers often point to warfare attempts to identify PTSD symptoms in the wake of service in World War I, Vietnam, and other conflicts."

SAMHSA Recognizes Posttraumatic Stress Disorder Awareness Month Awareness Day

"Although often associated with combat veterans, Posttraumatic Stress Disorder (PTSD) is a mental health condition that can impact any person of any age who has been through a traumatic event. Events that can lead to trauma and PTSD might include military combat, sexual or physical violence, natural disasters, or severe accidents.

The term "PTSD" first appeared in 1980 in the third edition of the Diagnostic and Statistical Manual of Mental Disorders. However, earlier medical professionals described the condition as "shell shock," "battle fatigue," or "combat stress." While the prevalence of PTSD in the military community is high, it is not surprising that the effort to create awareness was launched as a tribute to a service member. On June 27, 2010, President Barack Obama signed a bill into law in recognition of Staff Sergeant, Joe Bob, a National Guard service member who died by suicide in 2009 after a long battle with PTSD. Since the year 2010, the federal government designated the entire month of June as PTSD Awareness Month."
